

EDITORIAL

Dear Customers,

As every year, we are participating in the most important office furniture exhibition in North America, NeoCon in Chicago. We think it is the perfect place to share our visions and dreams with you. We would like to give you the opportunity to explore the most future oriented technologies at our booth. This year our highlight is the LOGICdrive system – the most integrated and optimized drive unit system for electric adjustable tables. We have incorporated the control box into the drive unit and added the option of an invisible handset. That given, our LOGICdrive technology is invis-

ible and integrated in the table frame which enables a maximum of design freedom. On top of that, we are showing our ErgoFit trainer – a unique ergonomic and training concept to stay healthy and active at the workstation during the working time. It is a 3D camera system that interacts with the user. These unique technologies are another milestone for our office furniture industry. Come and celebrate with the innovation leader LOGICDATA the future of the sit/stand office table - technology.

LOGICdrive SYSTEM

LOGICtouch concept

Invisible Sensing Technology

With the sensational LOGICtouch concept visible hand switches with tactile or capacitive buttons might belong to the past. Through a capacitive band – which is embedded directly in the table top – the new LOGICtouch is completely invisible and fully integrated.

Intuitive control

The LOGICtouch concept is absolutely intuitive in its usage since it mimics the human way of lifting and lowering. The sensor is activated through a simple touch of the surface. This initial activation is followed by a pull or push of the tabletop this makes the table move in the desired direction. Simply intuitive.

Less components, maximum design

With the integration of the hand switch into the tabletop, the number of visible components is reduced to a minimum and this allows a maximum of design of your table system. Together with the LOGICdrive system there almost no visible technical components on your office table system.

LOGICpower

SUPER LOW STAND-BY

Through a clever technical solution the LOGICdrive system is the only table system on the market that features 0,04W stand-by power consumption. The new LOGICpower supply is yet another step of LOGICDATA to further reduce the ecological footprint.

Detachable power plugs / cords

An absolutely great feature of the LOGICpower supply is the possibility of being plugged directly into a wall/floor-outlet. Alternatively it can be used in the classical way with a power cord. Regardless if used with a plug or a cord, both versions are detachable. This gives you the flexibility in the creation of your table system and allows for a state-of-the-art design.

Highly optimized size

The LOGICpower supply has been dramatically optimized in its size to meet and exceed your expectations in terms of freedom of product design. Optimized size means less shipping cost, less raw material used and again a reduction of the ecological footprint.

0,04W
STAND-BY

Be logic. BE REVOLUTIONARY.

LOGICdrive

Maximum freedom in design

The elimination of a control box also means a maximum freedom in design for you. Aside from two LOGICdrive units all you need is the LOGICpower supply and a connection cable between the two LOGICdrive units to run your height-adjustable table system. In connection with our LOGICtouch concept there are almost no visible technical components on your table – a logic revolution.

Full integration

The LOGICdrive is the first intelligent inline drive unit in the office furniture industry. Instead of using a separate control box, this drive unit incorporates all the necessary intelligence in one super-slim product.

High efficiency

By utilizing brushless DC technology, this sensational drive unit provides the highest levels of efficiency of a drive unit ever made for height-adjustable tables. Aside from high efficiency, the usage of brushless motor technology has the added benefit of a reduced possibility of mechanical wear.

Optimized & fully integrated ISP

The LOGICdrive has a fully integrated Intelligent System Protection (ISP). Whether through a sensor that is built directly into the drive unit or through software-based ISP, collisions with obstacles can be detected immediately, providing a highly optimized system protection.

Best-in-Class for Bench solutions

Markant Nederland B.V.

One LOGICpower supply

The LOGICdrive system is the ideal solution for bench systems where multiple workstations are in the same area. With the LOGICdrive system you need only one LOGICpower supply to power up to 4 tables or 8 drive units, which reduces the cost for electronic components of each system and the ecological footprint by using less raw material.

Individually controlled

Even though only one LOGICpower supply is used in a bench system, each table has its own hand-switch to individually set the height of the table.

Most ecologic solution

Aside from the component cost, also the stand-by consumption of a bench system is reduced dramatically utilizing one LOGICpower supply with highly optimized stand-by consumption. Thus providing the most ecologic solution for bench systems and multiple table setups.

TECHNOLOGY

ErgoFit Trainer

CONCEPT

3D CAMERA SYSTEM

The first interactive workspace that keeps you active.

Your ergonomic coach

The system acts as an ergonomic expert and your personal coach – it calculates ideal situations/adjustments at the workstation (sit/stand height). It can 'see' if you're sitting or standing correctly and provides feedback. It reminds the user to reach several sit/stand cycles per day and provides a training program to stay active and healthy.

Table sharing made easy

If a table is used by several individuals (table sharing) they can be recognized by the ErgoFit Trainer and the system knows who you are. Your personal settings are available in a database, so if you login at one table, your data setup is active.

Intuitive interaction through 3D camera

Just raise your hand and stand up/sit down, and the table moves to your recommended height. This is done by a 3D camera that sits on top of your workstation. Besides that, you can also adjust the height by using a smart device or a personal computer.

Absolutely expandable

External sources, such as light, smartphone charger/docking station can be activated if you are logging in and are automatically deactivated if you leave the table.

Personal statistics and health

You can easily review your table usage, such as working time in sitting and standing position. You can also see how many calories you have burned, which also encourages using the table more.

Set personal goals

Through the smart app you can set yourself daily goals. You will get feedback from the system if you have reached your goal and it keeps you motivated to reach them. You can also share the trophies that you can earn on social media.

Facility manager capabilities

The ErgoFit-Trainer system stores all relevant information into the cloud (internet) – which can be provided to the facility manager. Typically, the following information is available: selection of buildings, floors, rooms and tables; live-view about usage, live-view about table info and service info.
