

Welcome Home.

Dear Friends and Customers of LOGICDATA,

Today you are reading the new LogicHome newsletter. This newsletter is the start into a new technological era for home furniture.

LOGICDATA always stood for innovation leadership and has again invested a lot for its customers. Our mission statement 'creating intelligence for adjustable furniture' re-presents our passion and is our mission for you.

Throughout this newsletter you will experience the latest trends and get a taste of revolutionary product novelties for the upcoming months. LOGICDATA is always the first address if the technological future of home furniture is concerned. We have impressively proven that years ago with the introduction of our FLEX control box. Today we continue this path with our LIBERTYsystem.

We again took the challenge and pushed the limits to achieve a plus in freedom, ergonomics and comfort for you. Simply put 'LogicEvolution' at its best. Please enjoy together with the team of LOGICDATA the next technological milestone of our industry.

Yours Walter Koch, CEO

LogicHome is here – the former LogicCare division has been renamed to reflect what it ultimately stands for: Intelligent electronics for home furnishings like adjustable beds, recliners and motion furniture. The new name is just the one part of the exciting news that we have for you, our valued customer. This year we will introduce phenomenal new products that will be absolute game changers for the home furnishings industry.

With our new LIBERTYsystem we have created a control system for recliners that will give your customers the feeling of sitting in first class of an airplane - but at home.

And for you it provides a maximum liberty in design of the communication interface to the customer.

In addition to that we have developed our control systems to feature Wi-Fi connectivity which allows control of your furniture piece through a smart app on your Apple® or Android® smart device. And we take pride in our solution, because it is the only solution in the market – that we know of – that can be sold as an add-on and is affordable for you and your customers.

Please take a look inside our newsletter and find out more about our latest developments of LogicHome.

LIBERTY for you.

LIBERTYsystem -
the most integrated
control system for
motion furniture

Mount it where you want

The LIBERTYbase can be mounted in a console or in the arm of your motion furniture thus providing you full flexibility in design.

Simple & Comfort

The LIBERTYtouch has two modes of operation. In the simple mode you use a slider to activate motion in your furniture piece. By taking the LIBERTYtouch out of the LIBERTYbase you activate comfort functions like massage, heat or memory.

How about some comfort?

The LIBERTYbase offers Soft Start / Stop and Memory functionality for actuators as well as massage programs on different intensity levels and heat.

Wi-Fi Optional

Do you want to offer Wi-Fi connectivity to your motion furniture as an option? With the new LIBERTYbase it is possible.

The Dream Team

The LIBERTYsystem combines a control box – the LIBERTYbase – and a hand control – the LIBERTYtouch – in one great product. This results in greater flexibility in design, less mounting efforts and cost savings for you.

Your smartphone or tablet is out of power?

Not a problem. We have integrated a 2A USB port that charges either of your devices. And the USB port is oriented in 45° angle which takes the cable out of your way.

FIRST CLASS for your customers.

LIBERTYtouch –
great design meets
awesome features

Best in class appearance

The shape and size of the LIBERTYtouch is very ergonomic, it has a brilliant surface and provides a high-end look through 2 x 6 white LEDs that illuminate its full beauty.

It's all yours

Design your own control interface and arrange the functions as you think they are natural. This supports your customer communication and differentiates you from your competition.

Lock it up

You don't want anybody to play with your LIBERTYtouch? Hit a button on the LIBERTYtouch surface and lock it up.

Feedback is just a click away

The LIBERTYtouch is far more than your ordinary touch control. With its built in micro switch it offers a touch surface and additionally a click functionality to activate and confirm certain functions. This way your customer gets feedback on the action to follow.

2 in 1?

The LIBERTYbase is designed to be used in a sofa with two seats at a time. That saves you money, provides extra room for your design and means fewer used cables. And the LIBERTYtouch offers an control interface for two seats as well.

This is FIRST CLASS

If you ever have happened to sit in a first class seat on a new airplanes you'll probably have used the built-in hand control. You take them out of the dock and once you're done using it, you pull on the cord and it automatically retracts into the dock. We have implemented this great feature in our LIBERTYsystem for your customers comfort. And it solves the cord problem of an ordinary hand control.

Wi-Fi

more than just
an option.

Logic
Home.

- Design your own app and take your furniture to the next level of comfort and your brand to the cutting edge of technology
- LOGICDATA's modular solution allows you to sell Wi-Fi capability as an option. You decide in your manufacturing process if it will be added or not.
- The Wi-Fi module is easily integrated in your customers home network through our logic configuration mode, or can be used in direct mode.

- Our apps work for both Apple® and Android® devices
- Your motion furniture can be controlled via Wi-Fi or your hand control at the same time
- Your own app can also act as a way to communicate with your customer and keep them updated about your latest products.
